Terms

1. Schema – blueprint of how the database is constructed.
2. Attach a database – connect an existing database to SSMS
3. Detach a database – remove an existing database from SSMS (the database still exists, it just doesn't display in SSMS)
4. Restore a database – takes table, column and row information from a backup and restores everything to the point the backup was taken
5. Database diagram – diagram that shows how tables within a database are related
